Make Solar Energy More Efficient!

JGYC-182-16BB Heterojunction Solar Cells

✓ Heterojunction Cell Technology

A heterojunction cell combines all the advantages of crystalline and thin-film solar technologies in a single hybrid structure.

✓ High Bifaciality

The bifaciality is about 90%, and the power output of HJT cells is about 3%-6% higher than that of bifacial PERC and TopCon cells.

✓ Excellent Weak Light Performance

Under the lower irradiation intensity, HJT cells have an average of 1-2% more power per watt than PERC bifacial cells.

✓ The Highest Efficiency

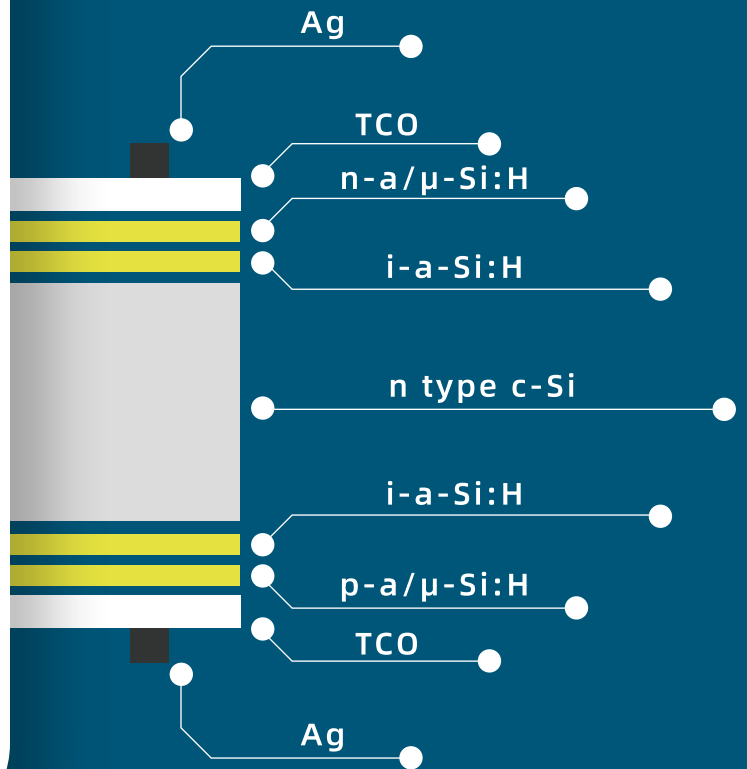

By using 182 mm N-type silicon wafer, the maximum power of half cells can reach 4.13W, and the efficiency can be up to 25.0%.

✓ Higher Efficiency at High Temperature

The lowest temperature coefficient can be up to -0.26%/°C. Under high temperature environments, the output of HJT cells per W is about 0.6-3.9% higher than that of bifacial TONCon cells.

✓ Anti-PID

Battery surface is TCO, so charge will not produce polarization phenomenon on the cells' surface TCO.
