FLUID SYSTEMS, 2023

TC90 Series Room Temperature Controllers

TC 90 series is the new large-screen LCD temperature controller, mainly used for room temperature control of the fan-coil systems in industrial, commercial, and civilian central air conditioning units. It controls the terminal fan-coil control valves to perform opening and closing according to room temperature changes detected by the temperature-sensing elements of their thermometers. In that way, the room temperature is adjusted to provide a comfortable and energy-saving indoor environment.

TC90 series LCD temperature controllers adopt microcomputer control technology with large-screen LCDs. Statuses displayed on the LCD screen: Working status (cooling, heating, and ventilation), fan speed, room temperature, and set temperature. Keys: Power switch key (⏻), mode switch key (M), fan speed selection key (🌀), and temperature setting key (▲ ▼).

Product Features

Basic Functions

- Mode switching of cooling, heating, and ventilation.
- Manually or automatically controlled three-speed switch of the fan.
- Large-screen blue LCD backlight.
- Power-off memory function.
- Room temperature programming function, 4 periods per day.

Key Locking Function

The temperature controller is designed with the key locking function. It automatically locks the keys 30 seconds after the user stops operating it, restricting other people from operating the temperature controller.

Low-Temperature Protection Function

When room temperature is below 5°C, the closed temperature controller will turn on to warm up the room automatically and display the icon 🌞 on the screen. The fan will operate at high speed automatically, and then turn-on the motorized valve. The temperature controller will automatically turn off when room temperature rises to 7°C.

Temperature Adjustment

If the user wishes the temperature displayed on the temperature controller is higher or lower than the actual temperature ($\pm 5^{\circ}\text{C}$), the following operations can be performed:

When the temperature controller is off, press "▲" and "▼" at the same time for 3 seconds, and then "XX°C" will be displayed on the screen (the working mode of the temperature controller is not displayed). Then press "▲" or "▼" to adjust the temperature value, which will be automatically confirmed 6 seconds after the adjustment.

Alarm Function:

When the sensor fails, the temperature controller will turn off the fan and the motorized valve, and display "E1" or "E2" on the screen.

- E1: Sensor short-circuit alarm
- E2: Sensor open-circuit alarm

When temperature is higher than 55°C, "HI" will be displayed on the screen; when temperature is lower than 0°C, "LO" will be displayed on the screen.

Status Displayed On The Large-Screen LCD

- Working mode (cooling ❄️, heating ☀️, and ventilation 🌀)
- Fan speed (low speed 📊, medium speed 📊📊, high speed 📊📊📊, or automation AUTO)
- Motorized valve opening 🚪
- Room temperature display
- Temperature display setting

Technical Parameters

Temperature-Sensing Element: NTC
Temperature Control Accuracy: ±1°C
Temperature Setting: 5~35°C
Display Range: 0~55°C
Working Environment: 0~45°C
Humidity: 5 ~ 95% RH (no condensation)
Key: Press the keys gently.
Self-Consumed Power: < 1W

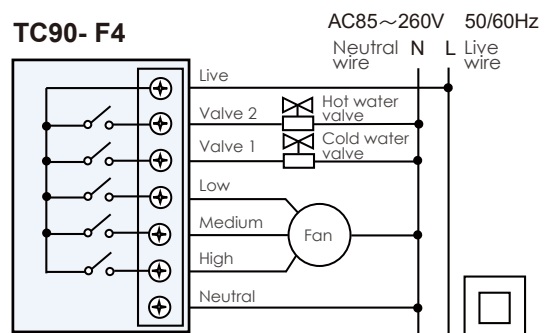

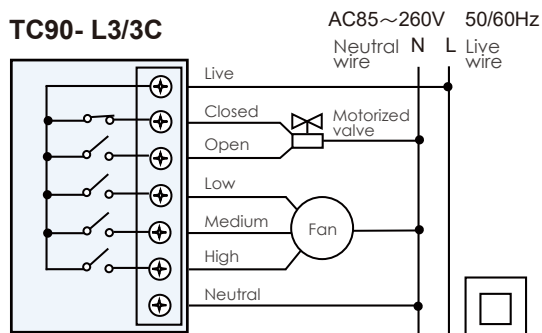

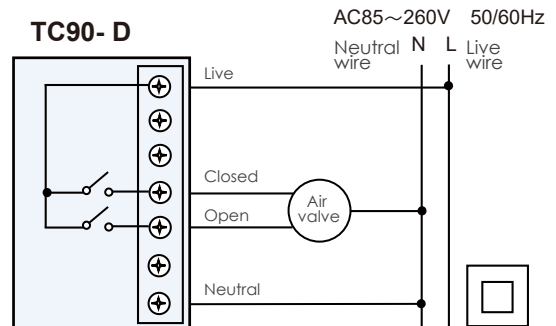

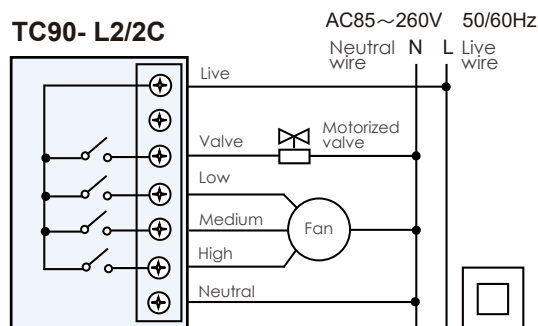

Power Supply Voltage: AC85~260V, 50/60Hz
Terminal Block: Can be connected to 2 * 1.5 mm² or 1 * 2.5 mm² wires
Load Current: 2 A (resistive load), 1 A (inductive load)
Shell: Fire-retardant PC + ABS
Dimensions: 90 * 88 * 15.5 mm (width * height * thickness)
Hole Pitch In Installation: 60 mm (standard)
Ingress Protection: IP30

Model Descriptions

TC90 – D/L2/L3/2C/3C/F4

- **D** Control the motorized air valve or the motorized air outlet.
- **L2** Control the motorized valve (two-wire valve) and the three-speed fan. When temperature reaches the specified value, close the motorized valve, leaving the fan to continue to run.
- **L3** Control the motorized valve (three-wire valve) and the three-speed fan. When temperature reaches the specified value, close the motorized valve, leaving the fan to continue to run.
- **2C** Control the motorized valve (two-wire valve) and the three-speed fan. When temperature reaches the specified value. The motorized valve and the fan will be closed.
- **3C** Control the motorized valve (three-wire valve) and the three-speed fan. When temperature reaches the specified value. The motorized valve and the fan will be closed.
- **F4** Applicable to the four-pipes system. Control the cooling/heating motorized valve (two-wires valve) and the three-speed fan. When temperature reaches the specified value, close the motorized valve, leaving the fan to continue to run.

Wiring Diagram

FC500 Series Fan-Coil Motorized Valves

FC500 series motorized two-way valves are mainly used to control the opening and closing of cold water and hot water in the terminal of the fan coil units of the air conditioning systems in order to provide a comfortable room temperature. When needed, the motorized valve will automatically turn on after receiving the control signal transmitted from the room temperature controller, then cool or warm the room as required. When temperature reaches the specified value, the room temperature controller will automatically cancel the transmitting signal, and the spring within the motorized valve will force it to turn off and bring it back to the original pre-set value.

Product Features

- Forged brass shell, stainless steel valve stem, and aluminum alloy bracket.
- Permanent magnet synchronous motor with a fully enclosed hysteresis clutch structure and spring reset.
- Synthetic rubber gasket to ensure zero leakage without any bubbles when closed
- Valve body design offers both a 2-way, normally closed type and a 3-way diverter type.
- Motor operates with low power consumption and minimal noise.
- The driver and valve body are separate, enabling quick and easy assembly and disassembly.
- Includes a built-in return spring and an optimized valve core structure.
- Threaded connections follow BSPT and NPT standards.
- Compact size, lightweight.

Technical Parameters

Power Supply Voltage: 220 VAC, 24 VAC ±10% 50 Hz

Power: < 6.5 W

Working Pressure: 1.6 Mpa

Medium: Water

Medium Temperature: 5°C ~ 90°C (40°F ~ 194°F)

Ambient Temperature: 0°C ~ 60°C (32°F ~ 140°F)

Action Time: Opening Time 10s, Closing Time 5s

Ingress Protection: IP40

Materials

Body: Brass

Shaft: Stainless Steel

Sealing: NBR or EPDM

Shell: High-strength flame-retardant ABS

Base: Aluminum Alloy

Spring: Stainless Steel

* Valves should be open when the system is pressurised.

Fc300 Series Fan-coil Motorized Heating Valves

FC300 series motorized-heating two-way valves are mainly used to control the opening and closing of cold water and hot water in the terminal of the fan coil units within the air conditioning systems in order to provide a comfortable room temperature of the fan coil units of the air conditioning systems in order to provide a comfortable room temperature. When needed, the motorized heating valve will automatically turn on after receiving the control signal transmitted from the room temperature controller, then cool or warm the room as required. When temperature reaches the specified value, the room temperature controller will automatically cancel the output signal, and the motorized heating valve will turn off slowly, cutting off the water source. FC300 series motorized heating valves are set to be powered off prior to delivery.

Product Features

- Forged-brass shell.
- Slow opening and closing, no noise, and reduced water hammer effect.
- Leak-free EPDM/PTFE sealing.
- The body structure is the normally-closed two-way type.
- The body comes with the spring return function.
- The actuator is connected to the ferrule of the body by a loose joint, easy to assemble.
- Thread standards: BSPT and NPT.
- Small size and light weight.

Technical Parameters

Power Supply Voltage: 230 VAC, 24 VAC ±10% 50 Hz
Power: < 3 W
Working Pressure: 1.6 Mpa
Medium: Water
Medium Temperature: 5°C ~ 90°C (40°F ~ 194°F)
Ambient Temperature: 0°C ~ 60°C (32°F ~ 140°F)
Action Time: 3 Minutes
Ingress Protection: IP44

Materials

Body: Brass
Disc: Brass
Shaft: Stainless Steel
Spring: Stainless Steel
Sealing: EPDM/PTFE
Shell: ABS Plastic

M22 Radiator Temperature-control Valves

M22 temperature-control valves are energy-saving products that help to build a comfortable living environment. They are installed at the inlet ends of the radiators which control the inflow of the radiators according to the temperature signal received. The room temperature can then be adjusted as wished. The exquisite design of the valves complies with EN215 and the valves can be applied to various radiators.

Product Features

- Adjustment range can be locked or set at any time.
- Automatic control by the temperature sensor according to ambient temperature.
- Straight-through and right-angle body structures are available.
- The temperature-control valve's head and body are easily connected and can be replaced at any time.
- Externally threaded connector with a loose joint.
- The shell of the temperature-control valve's head is made of enhanced nylon + ABS plastic.
- Brass body, stainless steel shaft, and EPDM seat.
- Comply with EN215.

Technical Parameters

Working Pressure: 1.6 Mpa

Medium: Water

Ambient Temperature: -20°C ~ 50°C

Adjustment Range: 7°C ~ 28°C

Body Temperature: 5°C ~ 100°C

Installation And Application

ES and BL Series Motorized Control Valves

Brass threaded motorized control valves of ES100/ES150 and BL220/BL350 series apply to HVAC (heating, ventilation, and air conditioning), and building automation systems. Once the motorized control valves receive signals transmitted by computers or other devices, they can then adjust temperature, pressure and control system parameters such as flow rate and liquid level. The valves are mainly used to convey mediums such as cold water, hot water, and ethylene glycol solution.

Product Features

- Have the equal percentage flow and the quick opening characteristics.
- The control valve's body has a built-in distribution plate that helps the flow control performance more stable.
- High-precision control offers precise actions.
- Low power consumption and low noise.
- Double O-shaped sealing design.
- Multiple signal controls: 2-point, 3-point, DC 0-10 V, and DC 4-20 mA.
- ABS shell with the advantages of small size and light weight.
- Easy installation and maintenance.

Technical Parameters

- Valve Type:** Two-way valve, three-way valve
Material: Shell: brass; dall: stainless steel; stem: brass
 sealing: RPTFE
Working Pressure: 2.0 Mpa
Medium: Cold water, hot water vapor, and the aqueous solution of ethylene glycol (concentration within 50%)
Medium Temperature: -20°C ~ 120°C
Flow Characteristic: Equal percentage curve, quick opening characteristic
Leakage Volume: Below 0.01% of kv value
End Type: BSPT of NPT threaded

Flow Characteristics

Thermal Output Characteristics

Measured Valve Flow Characteristic

Valve Selection

ΔPmax: The maximum allowable differential pressure when the valve is fully opened under normal working conditions.

ΔPmax: The maximum allowable differential pressure under low-noise condition.

ΔP100: Differential pressure when the ball valve is fully opened.

V100: Rated flow rate when the differential pressure is at ΔP100.

$$v_s = \frac{K_{100}}{\sqrt{\frac{\Delta P_{100}}{100}}}$$

- DN-Kvs
- DN50-63
 - DN50/DN40-40
 - DN40/DN32-25
 - DN32/DN25-16
 - DN15/DN20/DN25-10
 - DN20/DN15-6.3
 - DN20/DN15-4

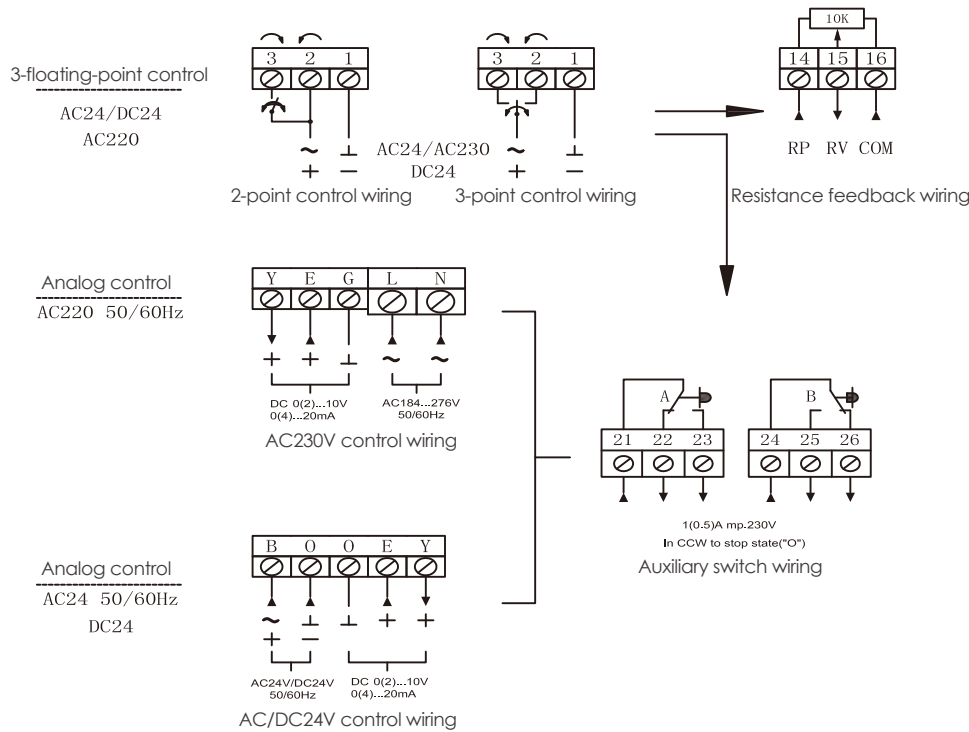

Maximum allowable differential pressure ΔPmax:

0.4 Mpa (0.2 Mpa is the differential pressure under low-noise operation)

Shutoff pressure differential ΔPs: 1.4 Mpa

Note: Shutoff differential pressure ΔPs: The shut-off differential pressure when the actuator is fully closed with the allowable leakage.

Electrical Wiring Diagrams

UL and AF Series Motorized Control Valves

Stainless-steel threaded motorized control valves of UL330/350 and AF550/572 series apply to HVAC and building automation systems. Once the motorized control valves receive signals transmitted by computers or other devices, they can then adjust temperature, pressure and control system parameters such as flow rate and liquid level. The valves are mainly used to convey mediums such as cold water, hot water, and ethylene glycol solution.

Product Features

- Adopt the AC synchronous hysteresis clutch motor. When the limited position is reached, the hysteresis clutch disengages the motor's output shaft from the transmission part to protect the motor.
- High-precision control offers precise actions.
- Low power consumption and low noise.
- Have the self-adaptive valve travel function.
- Multiple signal controls: Increment/floating-point signal, voltage 0 - 10 V, current 4 - 20 mA.
- ABS shell and cast-aluminum bracket with the advantages of small size and light weight.
- Easy installation and maintenance.

Technical Parameters

- Valve Type:** Two-way valve, three-way valve
Material: Shell: stainless steel; disc/stem: stainless steel; sealing: RPTFE
Working Pressure: 2.5 Mpa
Medium: Cold water, hot water, vapor, and the aqueous solution of ethylene glycol (concentration within 50%)
Medium Temperature: 0°C ~ 110°C/0°C ~ 150°C with a heat dissipation device
Flow Characteristic: Equal percent curve/equivalent linear
Leakage Volume: Below 0.02% of Kv Value
End Type: BSPT or NPT threaded
